Implementation Demonstration and Recording Guide

COMP3211 Group 149 PIM | 20 October 2026

Actual implementation MP4: outstanding. This guide and the tested command script are preparation materials, not a recording. A student must record the real application in use and supply an MP4 no longer than four minutes, as required by Project Description page 2, Deliverable 3.d.

Recording plan

Target 3 minutes 40 seconds, leaving 20 seconds below the four-minute maximum. The timings below are a planned budget, not a measured recording duration. Rehearse and trim narration or pauses; verify the actual exported MP4 duration.

Time budget	Visible actions	Suggested explanation
0:00-0:20	Launch empty; show all; load mixed sample; show all	One offline collection, four record types and explicit loading
0:20-0:50	Create Demo note; repeat creation and refuse duplicate	Normalized duplicate warning; refusal adds no record or ID
0:50-1:45	Define/use C1; update Task 2; reuse C1; invalid skipped branch	Result changes from 2,7 to 7; saved criteria reevaluate current records; whole expression is validated
1:45-2:25	Refuse then confirm deletion of 12; save; refuse overwrite	Show-before-delete, real saving and overwrite protection
2:25-3:05	Change note 1; load missing file and choose discard; show 1	Failed validation preserves original dirty records despite discard choice
3:05-3:40	Exit/cancel; exit/save to demo_final.pim	A cancelled exit keeps the session; successful save permits exit

Preconditions

Use a fresh disposable copy of the source root with supplied samples. Ensure demo_session.pim, demo_final.pim and missing_demo.pim do not exist in that copy. Do not delete or overwrite personal files to satisfy these conditions. Start Python 3.12 in that folder; use the appropriate platform command from the Developer Manual. Do not claim Windows verification if recording on macOS.

The exact input is docs/demo_commands.txt. Feed or paste short sections so the viewer can see important output. The y/n/s/d/c lines and quoted save path are responses to later prompts, not main commands. Do not paste the whole script into a live terminal so quickly that results cannot be read.

The full script has been executed through the real CLI in a temporary folder. It exited 0, produced the two intended ERROR messages (unknown search field and missing load file), and saved five records to demo_final.pim. Its final record IDs are 1,2,7,10,11; note 1 contains Unsaved demo change. This is script verification evidence, not proof that any video has been recorded.

Exact command and response sequence

Start the application first. Enter these lines in order:

```
show all
load "samples/mixed.pim"
show all
create PLAIN_TEXT text="Demo note"
create PLAIN_TEXT text="Demo note"
n
define type = TASK && description ~ "COMP3211" && deadline < "2026-11-22 00:00"
search @C1
update 2 deadline="2026-11-25 23:59"
search @C1
search type = TASK || unknown ~ "x"
delete 12
n
delete 12
y
save "demo_session.pim"
save "demo_session.pim"
n
update 1 text="Unsaved demo change"
load "missing_demo.pim"
d
show 1
exit
c
exit
s
"demo_final.pim"
```

Explain only what is visible. Alarms are stored/searchable times, with no automatic notifications; instructor scope confirmation is still outstanding. Do not imply the application catches forced process termination or auto-saves.

Recording and export checklist

- Record the actual terminal with readable font size and an uncluttered screen.

- State the real OS/Python used. Keep Windows claims pending unless tested there.

- Show both before/after search outputs and unchanged Task 7 where useful.

- Keep confirmations, intended errors and final successful save visible.

- Avoid exposing private paths, real personal information or other students' IDs.

- Export MP4 and measure its real duration; it must be <=4:00.

- Play the exported file and check legibility, audio if used, and complete ending.

- Name the final implementation recording demo.mp4 and add it to the handoff.

- Do not submit this guide or a simulated terminal animation as the required video.

The separate presentation has different rules: PDF slides, MP4 <=5 minutes, at least one minute per member, required face/student-ID visibility and prescribed contents. It is not replaced by this implementation demonstration.
